

## CARE ADVICE SCISSORS

To guarantee yourself many years of great service from your TONDEO hairstyling scissors, please heed the following advice:

### CLEANING

Scissors should be cleaned every day with an oil cloth. In the case of severe contamination, rinse the scissors under running water, then rub some scissor oil into the whole pair of scissors, including the cutting edges.

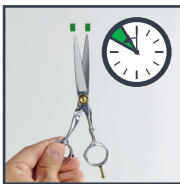

### OILING

Ideally wet the pivot point with a drop of scissor oil every day, so that operation and cutting remain good in the long-term.

Blade mobility test

Blades don't fully overlap: **right**

Blades hardly overlap at all: **false**

Blades hardly overlap completely: **false**

### BLADE MOBILITY

Keep the scissors safe and avoid loose screws to prevent from damage to points and cutting edges. Your TONDEO scissors will cut smoothly and open and close easily if the blades are allowed exactly the right amount of mobility. This will ensure that the cutting edges retain the intended angle when the blades are opened and that their cutting performance is maintained for a long period of time. How to check the blades' mobility and prevent them from being "too loose" or "too tight":

### SHARPENING SERVICE

Regular re-sharpening extends the lifespan of the scissors. Always have the scissors re-sharpened by TONDEO, as only we can bring the original sharpness with the original cutting edge angles back to the scissors.
